

FABRICAIR® CEILING DIFFUSERS

A global fabric-based air distribution system manufacturer FabricAir introduces a FabricAir® Ceiling Diffuser to its vast product portfolio. The new product is designed to create an advanced Indoor Air Quality (IAQ) and allow flexible design options. FabricAir Ceiling Diffusers offer a well-balanced air distribution without causing draft in occupied zones. They create reliable, healthy indoor air quality even in rooms with low ceilings. FabricAir Ceiling Diffusers is a perfect solution for integration in the new or already existing interior design. For a discreet option, ceiling diffusers can adapt to the colors of surrounding ceiling tiles. Diffusers can also become a fashionable statement if you decide to choose from a wide range of factory colors or custom prints. The installation of FabricAir Ceiling Diffuser can be completed in minutes. A simple tightening strap is all that is required to secure the ceiling diffuser to metal or flexible ducts. Lightweight product design allows to avoid any additional tools or materials (like ceiling anchors, seismic bracing, etc.), therefore the installation time of the diffuser can be shortened by at least 5 times.
